

MTH 418, Graph Theory, Exam Three

Ayman Badawi

65
65

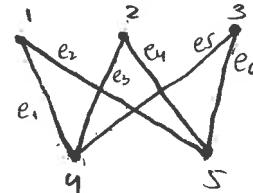

QUESTION 1. (15 points) Let $G = K_{3,2}$

(i) Is G an Eulerian trail? If yes, then construct such trail.

→ all edges → $v_0 \neq w_0$
 only 2 → 2 vertices with odd degree = odd
 half an edge

4 - 1 - 5 - 2 - 4 - 3 - 5

S

→ all vertices

(ii) Is G a Hamiltonian path? If yes, then construct such trail.

1 - 4 - 2 - 5 - 3

S

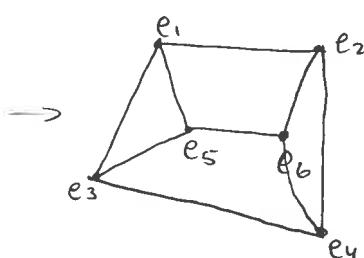

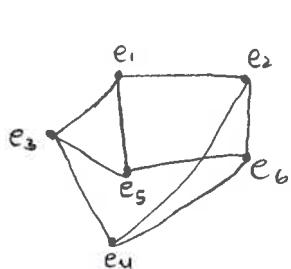

(iii) Find the chromatic number of $G \rightarrow$

$\chi(G) = 2$

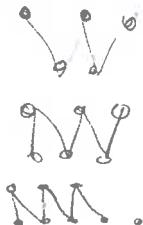

S

(iv) Draw the line graph of G .

(v) Find the Edge-chromatic number of G and the chromatic number of $L(G)$.

$$\chi'(G) = 3 \quad \chi(L(G)) = 3$$

$$3+4-5=2$$

QUESTION 2. (24 points)

(i) For what values of m is $K_{6,m}$ a Hamiltonian path?

$$m = 5 \text{ or } 6 \text{ or } 7$$

with vertices

(ii) Prove that K_5 is not a planar. Is K_8 a planar?

$$\nexists \text{ planer: } (F| + |V| - |E|) = 2$$

$$|F| = 2 - |V| + |E|$$

$$|E| = \frac{5 \cdot 4}{2} = 10$$

$$3|F| \leq 2|E|$$

$$3(2 - |V| + |E|) \leq 2|E|$$

$$6 + 3|V| + 3|E| \leq 2|E|$$

$$|E| \leq 3|V| - 6$$

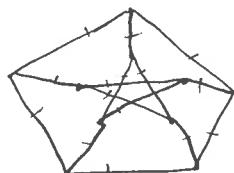

$\therefore K_5$ is not planar.

Since K_5 is a subgraph of K_8 , K_8 is not planar.

(iii) Prove that Peterson graph is not a planar.

$$10 < 15 - 6 \rightarrow 10 \nleq 9 \text{ contradiction}$$

DENY. ASSUME PETERSEN IS PLANER \rightarrow Girth = 5, $|V| = 10$, $|E| = 15$

$$(F| + |V| - |E|) = 2$$

$$|F| = 2|E| - |V|$$

$$5(2 + |E| - |V|) \leq 2|E| \rightarrow 10 + 5|E| - 5|V| \leq 2|E|$$

$$5|F| \leq 2|E|$$

$$3|E| \leq 5|V| - 10$$

$$|E| = 15$$

$$|V| = 10$$

$$45 \leq 40 \rightarrow 45 \nleq 40$$

contradiction

\therefore Petersen is not planer

(iv) prove that Q_4 is not a planar. Is Q_9 a planar?

$\Rightarrow Q_9$ is not planar as Q_9 is subgraph of Q_4 and Q_4 is not planar.

$$|V| = 16$$

$$|E| = 32$$

$$F = 2 + |E| - |V|$$

$$\text{Girth} = 4$$

$$② 4|F| \leq 2|E|$$

$$① 3|F| \leq 2|E|$$

$$4(2 + |E| - |V|) \leq 2|E|$$

$$8 + 4|E| - 4|V| \leq 2|E|$$

$$8 + 4(16) - 4(8) \leq 2(32)$$

$$32 \leq 28$$

contradiction

Hence Q_4 is not planar.

(v) What is the chromatic number of Q_5 ? prove your claim.

$\chi(Q_5) = 2$ because Q_5 is a connected bipartite graph

(vi) Find the dominating number of Q_3 and construct such set

$$\gamma(Q_3) = 2$$

$$D = \{000, 111\}$$
